

ST190

THE DARK ART OF DISTANCE

HT1770 MARAGING STEEL. CARBON COMPOSITE CROWN. SPEED ENGINEERED.

A deeper, powerful fairway wood – combining a high energy HT1770 Maraging Steel face and lower spin chassis. Engineered using Mizuno's amplified Wave soleplate and carbon composite crown.

“ The ST190's deeper face is not just useful from the tee – it also gives the clubface a larger frame that functions more like a driver for higher ball speed. Normally that is compromised by a higher sweet spot and additional backspin – but by using our carbon composite crown and Wave Soleplate, we were able to combine high ball speeds with an efficient ball flight. ”

Kei Tsuji – ST190 Lead Designer.

ST190FW DRIVER SPECIFICATION

	3W TS	3W	5W
Loft Range	13-17 °	15 °	18 °
Length	45"	43"	42.5"

Dexterity: 3W LH available
Grip: M31 360

ADJUSTABLE 3TS: In addition to the fixed hosel 3 (15) and 5 (18) – the Tour S 3 wood ranges from 13-17 degrees with a stronger ball flight.

DEEPER H1770 MARAGING STEEL FACE: A deeper clubface flexes more like a driver – maximising the ball speed produced by a high energy H1770 Maraging Steel.

CARBON COMPOSITE CROWN: Ultra lightweight carbon allows 4g of weight to be moved low within the clubhead – allowing a rare combination of deeper clubface and efficient, low spin ball flight.

AMPLIFIED WAVE SOLEPLATE: Larger first wave creates a balance of stability and sweet spot height – for effective off centre forgiveness without too much backspin.

HARMONIC IMPACT TECHNOLOGY: Powerful, solid sound - tuned through the study of vibration and soundwaves.

SPEED ENGINEERED: Performance of our exotic SP700 Forged Ti face moves to new levels with improved internal engineering. The ST190 CORTECH face, re-engineered CT ribs and internal structure combine to squeeze ball speed from the entire clubface.
