

# XHOT

## DISTANCE, ACCURACY AND PERFORMANCE TO HIT GOOD SHOTS

### DRIVER

The X HOT Driver is built to give you good ball speed for long distance. The VFT face is designed for speed, the forgiveness leads to consistency, and the precise Center of Gravity positioning promotes balanced ball flights. This is a driver you can hit long and straight.

### FAIRWAY WOOD

The X HOT Fairway Wood is easy to hit. You can hit it longer with the fast face, it's easy to get up in the air with precise Center of Gravity positioning, and it's a great club off the tee. This is a fairway wood you can hit well on a lot of different shots.

### HYBRID

The X HOT Hybrids are a strong alternative to longer irons, and they are built for speed and distance. They are designed to make the ball go a long way with an easy launch.

### IRONS

The X HOT Irons are long and have forgiveness for consistent shots across the face. They have the feel and sound designed to help your game.
